(54) Title: BEVERAGE BREWING DEVICE

(57) Abstract: Beverage brewing device, in  
particular for brewing hot beverages such as  
coffee, tea, roasted-barley coffee, camomile tea  
and similar infusions, comprising substantially  
a brewing chamber (1), in which the substances  
needed to prepare the infusion are introduced  
through a mixing hopper (2), which is situated  
above said brewing chamber, and are mixed  
by compressed air being admitted therein as  
supplied by an air compression means (7), the  
device further comprising a removable filter (10)  
that closes the brewing chamber on the lower  
side thereof. The opening (5) connecting the  
mixing hopper (2) with the brewing chamber  
(1) is closed by an automatic valve (6), which is  
actuated by the compressed air supplied by said  
air compression means (7) via a delivery conduit  
(8). Very simple and rational technical solution.
